CARING NATURALLY, ONE PERSON AT A TIME

Nutritional IV Therapy

Nutritional IV therapy is commonly used for a wide range of health benefits. IV (intravenous) therapy is a method of feeding vitamins, minerals, and amino acids directly into the bloodstream. Many physicians believe IV therapy (Cocktails) to be safe, effective, restorative and preventative.

Possible Benefits:

- Detoxifies the body
- Reduces hypertension
- Increases circulation
- Improves symptoms of COPD
- Improves mental sharpness
- Reduces symptoms of stress
- Improves cardiovascular disease
- Enhances immune system
- Boosts energy
- Prevents illness
- Improves hangovers
- Shortens recovery time for athletes
- Relieves allergies
